

ABSTRACT

A container comprising a cover and a containing portion, the cover adapted to fit adjacent a portion of an inner edge of the containing portion. The cover including a body portion having an opening therein, and a stopper movable between an open position and 5 a closed position, the stopper adapted to close the opening when the stopper is in the closed position, thereby causing an air-tight seal between the cover and the containing portion and allows the cover to be removed from the container when the stopper is in the open position by releasing the air-tight seal.
